$5.00 Reward

for return to:

Arthur Cronquist
New York Botanical Garden
Bronx Park
New York 58, N.Y.

V.557

7768 – August 11, 1953
light sandy soil among scattered
Ponderosa pines 4 miles south
of Crescent, Klamath Co., Oregon.
Twp. 25S., R. 8 or 9E.

Aster shastensis Gray
var. radiatus Gray

(35) 9.9.

Aster shastensis v. radiatus

7769 – August 11, 1953 Occasional
shrubs 3-4 dm tall along
roadside in open Ponderosa
pine forest 3½ miles north of
Chemult, Klamath Co., Oregon.
~~R. 8E.~~ Twp. 27S., R. 8E.
Soil light and gravelly. Rays
2-3 Heads yellow
Haplopappus bloomeri Gray

Haplo. bloomeri. (8)

7770- August 11, 1953
In light, gravelly soil at edges of ponderosa pine forest
4 miles southeast of Fort
Klamath, Klamath Co., Oregon
Twp. 34 S., R. 7½ E.
Rays mostly 5
Eriophyllum lanatum (Pursh) Forbes
var. achilleoides (DC.) Jeps.

Eriophyllum lanatum var. (5)

7771- July 3, 1953-
see under 7361-2.

Aster militeris - specimen labeled type at ND is Howell 1439, Grants Pass, Sept. 1892. Certainly A. chilensis sens. lat. Two other sheets of the same collection are the same thing. I think I would also call it A. chilensis sens. stricto - Jones mont Pk. rather glabrous. ~~to~~ Involucral bracts

The specimen of Senecio
daynae at ND has a
small amount of loose tomentum
on the fine side for intergenium
and the coarse side for the cami.
~~The~~ The basal leaves
are elongate, narrow, rather
small (<15 cm. long, 1 cm. wide)
and remotely sharp-serrate.
Reserve judgment now as to
identity. Terminal head
well developed by the
ca 7 laterals. Inft. open.

I don't want to call
the type S. inderensis
an odd-ball of S. pseudaureus.
But it does much resemble
the large forms of
S. paucifloras from
the Sierra Nevada.
+ here are 6 heads on one
specimen, and 7 on
the other. The peppermint
leaves are lacinate. The
leaves look ~~~ neither
very thick nor very thin.
The specimens are just shy of
5 cm. tall. I really suspect
that this is paucifloras.
Why not? The rose
is short, stout, scaly
& freely rooting. No long
rhizome
